This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

PREFACE TO THE FIFTH EDITION, REVISED AND ENLARGED.

THE present volume is a revised and enlarged edition of "10,000 Words Often Mispronounced."

The book has been subjected to a thorough and careful revision; and, furthermore, the supplement has been enlarged by the addition of 2000 words that have been found to present difficulties in pronunciation.

Webster's International Dictionary, the Century Dictionary, the Standard Dictionary, and Worcester's Dictionary are among the principal authorities consulted in the preparation of the present edition.

It is hoped that the book, in its revised and enlarged form, may meet with a continuance of the favor so generously accorded to it in the past.

PREFACE.

IT is related of the French painter Girard, that when a youth and in poor circumstances, he was the bearer of a letter of introduction to Lanjuinais, a member of the Council of the First Napoleon. The young artist was shabbily attired, and his reception was frigid in the extreme. Lanjuinais, however, in the course of the conversation that ensued, was so much pleased with the intelligence and amiability displayed by the young man, that at the termination of the interview, he courteously accompanied him to the door of the ante-chamber.

Girard, contrasting the manner of his cordial dismissal with that of his cool reception, could not avoid an expression of surprise.

"My young friend," said Lanjuinais, anticipating the question, "we receive an unknown person according to his *dress*—

we take leave of him according to his *merits*."

The lesson here taught with reference to shabbiness of attire suggests a similar one with reference to carelessness in pronunciation. For if the manner of one's dress can play so important a part in his reception by others, it is no less certain that his manner of expression (which is the garb in which our spoken thoughts are clothed) must prejudice others either favorably or unfavorably according as it is or is not correct.

In spoken language, pronunciation is the most striking element, and thus it happens that it is, more than any other one thing, the most obvious test of general culture.

Even in a speaker of recognized ability, his mispronunciations fall harshly upon the ear, and cause the hearer to suspect that his early if not his later education has been wanting in polish; or (what is, perhaps, more to his detriment) that he has not been accustomed to the society of refined and cultivated people.

But pronunciation is important, not merely because it serves to make good

the first impressions, but for other and more weighty reasons. The importance of conveying ideas with clearness and precision, cannot for a moment be doubted; and if no acknowledged standard of pronunciation existed, spoken language would largely fail as a medium for conveying ideas.

Those who, in Italy and France, have made a special study of this subject say that there are hundreds, and even thousands of dialects existing in the different parts of those countries, and that persons, meeting from remote sections, find it exceedingly difficult to understand one another. The same is true of Germany and England, but fortunately in a lesser degree of our own country; although any one who has travelled extensively in the United States is able to distinguish already the beginnings of dialects, which should, if possible, be eradicated by teaching a uniform system of pronunciation in our schools, as well as by encouraging correctness of pronunciation among adults generally.

The study of foreign languages has, of late years, assumed great importance in

the United States. A leading difficulty in mastering these languages lies at the threshold, in the form of pronunciation. This difficulty might be easily removed by first studying carefully the pronunciation of our own language, which would result in an acquaintance with at least forty-two important elementary sounds. To say nothing of the advantage thus acquired in one's ability to pronounce English, the pronunciation of foreign languages would be rendered comparatively easy, since the remaining eight foreign sounds, so-called, might be easily learned in a single lesson —at least, sufficiently well for practica purposes.

This knowledge of elementary sour is not only of use in all matters of readi speaking, oratory, and singing, and short-hand, but it also assists in awal ing people to the monstrosities of present system of spelling, and the sequent desirability of a spelling re This knowledge is also serviceal assisting one to trace the broad l relationship that exist among c languages, as taught in the etyr of words,—an acquaintance wi

relationship is exceedingly valuable in mastering not only foreign languages, but our own as well.

The satisfaction that comes from a knowledge of English pronunciation and the consequent ability to pronounce correctly, is similar to the pleasure that results from skill in any other fine-art, and becomes a source of continual enjoyment, since this higher art is brought into constant requisition in some form or other.

In presenting to the public a new book on English pronunciation,—the third and last of this series,—the author desires to call attention to the following points :

1. The list of words—about seven thousand in number, considered as a carefully selected one, is more complete than any other that has yet appeared. The aim has been to select such words only as, through inherent difficulty or carelessness on the part of the speaker, are liable to be mispronounced ; no effort having been made to increase the list by inserting words concerning which no doubt could well arise.

2. The number of Proper Names—twenty-five hundred—is unusually large

for a book of this kind. No other similar book pretends to give a list in any way approaching it for completeness.

3. The list presents the pronunciations of all those common words and phrases from foreign languages, that might give difficulty.

4. The pronunciations are very carefully indicated,—each sound in each word being accurately represented, so that no shadow of doubt can exist as to the correct pronunciation.

5. The system of marking words is not only identical with that used in the two previous volumes of this series, but is practically the same as that employed in Webster's and Worcester's Unabridged Dictionaries; it has, however, been rendered somewhat simpler by respelling the words phonetically, thus avoiding the use of unnecessary or duplicate signs.

6. The principal authorities consulted are Webster, Worcester, Stormonth, and Haldeman.* For names of places and persons, Lippincott's Gazetteer, and Lippincott's Biographical Dictionary (standard authorities for the pronunciation of Proper Names) have been referred

* See note, p. 39.

to frequently. In addition, the New Imperial, Walker, Sheridan, Knowles, Jameson, Perry, Smart, Cooley, and Cull have been consulted, and, in many instances. their pronunciations have been given.

7. Where several important pronunciations of a word occur, the fact is indicated, —Webster's pronunciation being generally placed first.

8. In addition to the author's comments on various words, quotations are made from leading authorities, where it is thought that these might be valuable or interesting.

9. The book will assist a person materially in laying a foundation for the study of French and German, by teaching him the sounds regarded as peculiar to those languages. The frequent occurrence of these sounds in words incorporated into English, suggests the necessity of adopting them into our own language, and this necessity is here recognized.

There is a tendency in the evolution of every spoken language to increase the number of sounds by two processes : first, by the recognition of distinctions among the sounds native to the language ; and

secondly, by the incorporation of new sounds from foreign languages, when these occur sufficiently often to demand recognition.

10. A brief chapter on "The Sounds of the English Language,—both Native and Adopted," has been prefixed to the "List of Words." The reader is advised to study this chapter carefully. It will be well also to acquaint one's self thoroughly with the "Key of Signs or Diacritical Marks," and to read with attention the chapter entitled "Suggestions concerning the Use of the Book." In this way, it is hoped that no difficulty will be experienced in ascertaining the pronunciation of any word found in the list.

Those who desire to acquaint themselves with the "Principles" of the art of Correct Pronunciation are referred to the author's manual, entitled "How Should I Pronounce?"; while those who desire a more elementary discussion of the subject will find it in his "School Pronouncer, Based on Webster's Unabridged Dictionary."

I take pleasure in acknowledging my indebtedness to Professor Appleton Park

Lyon, of New York, whose intimate acquaintance with all matters pertaining to the science of Phonology has been of frequent service to me in settling difficult or doubtful points.

I have endeavored to avoid the too common practice of commenting upon the easy and shunning the difficult; I trust, therefore, that I shall not be held amenable to the criticism involved in Young's familiar couplet:

> "How commentators each dark passage shun,
> And hold their farthing candle to the sun."

IT is not the province of this book to discuss the Elementary Sounds of the English language, except in a general way, nor to give drills in these sounds; this subject has been elsewhere treated by the author.* The object of the present volume is mainly to indicate the correct pronunciations of words often mispronounced; and it is, in consequence, only necessary in this chapter to furnish a brief survey of the sounds, either actually occurring in English, or adopted into it from foreign languages. By means of this, it is hoped that the exact signification of the key and of the diacritical marks will be

easily understood by those who have not had the advantage of studying the other books.

The subject of English pronunciation is more difficult than is generally supposed, and hence it must not be thought that the following remarks are any thing more than a set of suggestions for the use of the present volume.

I. SIMPLE OR ELEMENTARY SOUNDS.

(1) The Forty-Two Native or Common Elementary Sounds.

1) *Vowel-Sounds.*

1. ä, as in arm, father, ah.

This sound should be kept open and broad, and yet should not be confounded either with the sound of *a* in *all*, or with the sound of *a* in *at*. It is generally called the Italian *a*.

2. å, as in ask, past, soda.

This is the first shade-vowel sound of *a*. It is called a shade-sound because it differs but slightly from the preceding sound (ä). It requires some practice to give it correctly.

3. ă, as in at, man, tap.
This sound is the most common sound of *a*, and is generally known as its *short* sound.

4. â, as in air, dare, care.
This is the second shade-vowel sound of *a*, and differs but slightly from the preceding sound (ă). It is invariably followed by the sound of *r*.

5. ĕ, as in ebb, let, met.
This is a very common sound of *e*, and is generally known as its *short* sound.

6. ā, as in ale, fate, pay.
This is known as the *long* sound of *a* By some orthoëpists it is considered a diphthongal or double sound.

7. ĭ, as in it, pin, pity.
This sound is generally called the *short* sound of *i*.

8. ē, as in eel, meet, he.
This sound is generally called the *long* sound of *e*.

9. ŏ, as in odd, pop, cot.
This sound is generally called the *short* sound of *o*.

10. ô, as in orange, dog, God.
This is the first shade-vowel sound of *o*, and differs but slightly from the preceding sound (ŏ), with which it is frequently confounded.

11. ô, as in or, for, bought.
This sound is sometimes called the *broad* sound of *o*.

12. ŏ, as in only, whole, wholly.
This is the second shade-vowel sound of *o*, and differs but slightly from the succeeding sound (ō), with which it is frequently confounded.

13. ō, as in old, hope, so.
This sound is generally called the *long* sound of *o*.

14. o͝o, as in look, book, took.
This sound is commonly called the *short* sound of double *o*, and is to be carefully distinguished from the succeeding *long* sound (o͞o).

15. o͞o, as in ooze, moon, coo.
This sound is commonly called the *long* sound of double *o*, and is to be carefully distinguished from the preceding *short* sound (o͝o).

16. û, as in urge, fur, cur.
This is the first shade-vowel sound of *u*, and closely resembles the succeeding sound (ŭ), from which it should be carefully distinguished.

17. ŭ, as in up, but, luck.
This sound is commonly called the *short* sound of *u*, and is also known as the *natural* vowel-sound, because it is the one most easily produced by the vocal organs.

18. ẽ, as in ermine, serge, verse.
This is the second shade-vowel sound of *u*, and differs but slightly from the preceding sound (ŭ).

2) *Consonant-Sounds.*

19. y, as in ye, yet, your.
It should be observed that this sound is very similar to that of long *e* (ē) very

lightly pronounced, before an accented vowel-sound;—as in *yard* (ē-ärd′).

20. w, as in we, wet, warm.
It should be observed that this sound is very similar to that of long double *o* (o͞o) very lightly pronounced, before an accented vowel-sound;—as in *will* (o͞o-il′).

21. r, as in rave, roar, peer.
In foreign languages, the *r* is generally trilled; in English, less often.

22. l, as in lave, lull, ill.

23. ng, as in ring, singing, long.
This sound seems never to occur at the beginning of a word.

24. n, as in no, nun, in.

25. m, as in me, mum, him.

26. zh, as in azure, measure, rouge.
The digraph *zh* never occurs in English; the sound being always represented by some other combination of letters, or by a single letter.

27. z, as in zebra, buzz, is.

28. th, as in thy, thither, breathe.

29. v, as in van, vivid, have.

30. g̃, as in get, gig, egg.
This is commonly known as the *hard* sound of *g*.

31. j, as in jet, judge, edge.
This is commonly known as the *soft* sound of *g*.

32. d, as in do, did, add.

33. b, as in be, bib, ebb.

34. sh, as in she, mission, hush.

35. s, as in see, cease, hiss.
This is said to be the most common sound in the language.

36. th, as in thigh, thing, moth.
Persons who lisp, introduce this sound where the sound of *s* properly belongs.

37. f, as in foe, fife, if.

38. k, as in key, kick, oak.

39. ch, as in chew, church, each. This should be regarded as a sound, and not, as some orth claim, a union of *t* and *sh*.

40. t, as in to, tat, it.

41. p, as in pay, pip, lip.

42. h, as in he, hot, hoot.

(2) The Eight Adopted or Naturaliz mentary Sounds.

In addition to the ordinary fo sounds of the English language, th certain other sounds which, altho a certain sense, foreign to the lan may be considered as having been a into it, since they occur in words tha been made part of our mother-t Even the person who makes no p sion to a knowledge of foreign lang must frequently encounter such wo

Goethe, Müller, encore, vin, bonbon, un Richter, Leipzig.

It is absurd to say that these sounds do not occur in English, since they are already in actual use; moreover, they are of necessity not only recognized, but to some extent discussed, in all our larger dictionaries and works upon English pronunciation.

It is virtually impossible to pronounce many familiar proper names with any degree of accuracy, without an acquaintance with these eight sounds, and our dictionaries generally seem to presume that their readers are acquainted with them.

The learning of the correct pronunciation of the French and German languages (now so universally studied), would be rendered much easier if a due acquaintance with these sounds were already possessed; as there would then be no new sounds to be learned for these languages, unless one should wish to make finer distinctions than are generally observed.

1. ö, as in Göthe (another spelling for Goethe). French *eu*, as in *leur*.
This sound resembles the English *e*

in *earth* (ĕ), which may be substituted for it, when one is unable to produce the original sound.

2. ü, as in Müller. French *u*, as in *tu*.
If, while the lips are rigidly held in the position for saying o͞o, one should attempt, with his tongue, to say ē, a close resemblance to this sound would result. For those unable to produce this sound, the sound of *u* in *duke* (ū) may be substituted.

3. ăN, as in encore.
This is the *first* of the four French nasal-vowels. If the English syllable *ăng* be pronounced, with the *ng* lightly uttered, it will approximate this sound, and may be substituted for it by those who are unable to give the original sound. The N added to the *ă* represents no sound, but simply indicates that the *ă* is to be nasalized.

4. ăN, as in vin.
This is the *second* French nasal-vowel. If the English syllable *ăng* be pronounced with the *ng* lightly uttered, it

will approximate this sound, and may be substituted for it by those who are unable to give the original sound. The N added to the *ă* represents no sound, but simply indicates that the *ă* is to be nasalized.

5. ÔN, as in bonbon.

This is the *third* French nasal-vowel. If the English syllable *ông* be pronounced with the *ng* lightly uttered, it will approximate this sound, and may be substituted for it by those who are unable to give the original sound. The N added to the *ô* represents no sound, but simply indicates that the *ô* is to be nasalized.

6. ŭN, as in un.

This is the *fourth* French nasal-vowel. If the English syllable *ŭng* be pronounced with the *ng* lightly uttered, it will approximate this sound, and may be substituted for it by those who are unable to give the original sound. The N added to the *ŭ* represents no sound, but simply indicates that the *ŭ* is to be nasalized.

7. K, as in Richter.

This is a very common sound in German, and may be produced by attempting to give the sound of *h*, while the vocal organs are rigidly held in a position for giving the sound of *k*. It may be imitated by prolonging the sound of *k* in *ẏk*, and avoiding the initial part of the *k* sound. For those who are unable to give this sound, the English sound of *k* may be substituted. It is well to observe that this sound is slightly modified by the nature of the vowel that precedes it.

The Scotch sound of *ch*, as heard in *loch*, is essentially the same, and for all practical purposes may be deemed identical with it.

8. G, as in Leipzig.

This is a vocalized form of the preceding sound. It occurs in German, and may be produced by attempting to give the sound of *y*, while the vocal organs are rigidly held in a position for giving the sound of *k*. It may be imitated by prolonging the sound of *g̈* in *ẏg̈*, and avoiding the initial part of

the $\bar{g}$ sound. For those who are unable to give this sound, the English sound of $\bar{g}$ may be substituted. The importance of this sound is duly recognized by Vietor.*

It may be observed that these eight foreign sounds are frequently found in the ordinary English books and newspapers. These sounds, together with the forty-two native ones previously discussed, give precisely fifty sounds that may be considered in use in the English language.

2. COMPOUND OR DIPHTHONGAL SOUNDS.

There are in English, in addition to the fifty simple sounds given above, several compound or diphthongal sounds, so called because each one consists of two simple sounds so closely united as to appear like a single sound. They all belong to the vowel-class, and are four in number: ī, oi, ow, ū.

* For a very full and clear discussion of this sound see Vietor's recent and valuable work, "Elemente der Phonetik und Orthoepie des Deutschen, Englischen, und Französischen," pp. 113–124.

1. ī, as in ice, mine, by.

This compound sound is often mistakenly considered to be a simple sound, because it is generally represented by a single letter. In reality, it consists of a close union of the two simple sounds, ä as in *arm*, and ē as in *eel*, with the accent on the *first* sound; thus (ä′-ē).

2. oi, as in oil, noise, boy.

This compound sound consists of a close union of the two simple sounds, ô as in *or*, and ĭ as in *it*, with the accent on the *first* sound; thus (ô′-ĭ).

3. ow, as in out, bound, now.

This compound sound consists of a close union of the two simple sounds, ä as in *arm*, and o͞o as in *ooze*, with the accent on the *first* sound; thus (ä′-o͞o).

4. ū, as in duke, lute, new.

This compound sound consists of a close union of the two simple sounds, ĭ as in *it*, and o͞o as in *ooze*, with the accent on the *first* sound; thus (ĭ′-o͞o).

the $\bar{g}$ sound. For those who are unable to give this sound, the English sound of $\bar{g}$ may be substituted. The importance of this sound is duly recognized by Vietor.*

It may be observed that these eight foreign sounds are frequently found in the ordinary English books and newspapers. These sounds, together with the forty-two native ones previously discussed, give precisely fifty sounds that may be considered in use in the English language.

2. COMPOUND OR DIPHTHONGAL SOUNDS.

There are in English, in addition to the fifty simple sounds given above, several compound or diphthongal sounds, so called because each one consists of two simple sounds so closely united as to appear like a single sound. They all belong to the vowel-class, and are four in number: ī, oi, ow, ū.

* For a very full and clear discussion of this sound see Vietor's recent and valuable work, "Elemente der Phonetik und Orthoepie des Deutschen, Englischen, und Französischen," pp. 113–124.

1. ī, as in ice, mine, by.

This compound sound is often mistakenly considered to be a simple sound, because it is generally represented by a single letter. In reality, it consists of a close union of the two simple sounds, ä as in *arm*, and ē as in *eel*, with the accent on the *first* sound; thus (ä′-ē).

2. oi, as in oil, noise, boy.

This compound sound consists of a close union of the two simple sounds, ô as in *or*, and ĭ as in *it*, with the accent on the *first* sound; thus (ô′-ĭ).

3. ow, as in out, bound, now.

This compound sound consists of a close union of the two simple sounds, ä as in *arm*, and o͞o as in *ooze*, with the accent on the *first* sound; thus (ä′-o͞o).

4. ū, as in duke, lute, new.

This compound sound consists of a close union of the two simple sounds, ĭ as in *it*, and o͞o as in *ooze*, with the accent on the *first* sound; thus (ĭ′-o͞o).

f ā t, which a careless person would be liable to pronounce făt—noticing the *spelling* only, and not observing the marking of the letter *a*. Whereas, by a reference to the key, it will be seen that the three symbols (f, ā, t) stand for three definite sounds which, when combined, produce the word *fate*, as correctly pronounced.

2. In endeavoring to pronounce a word correctly, it is well first, to utter distinctly, and in their proper order, the separate sounds in each syllable, and then to combine the syllables into the word.

Since every word consists of one or more syllables, and each syllable is composed of simple sounds, it follows that by building up the syllables—sound by sound, and then combining these syllables in their proper order, the word is constructed, if the proper syllable be accented.

3. It is important to observe the place of the accent.

Many words are mispronounced simply because the accent is misplaced. In the word *exquisite*, for instance, if the accent be placed upon the *first* syllable, the word is correctly pronounced; whereas, if it be

placed upon the *second* syllable, it is a mispronunciation. With this exception, there is no difference between these two pronunciations of the word.

4. It is necessary to become acquainted with the Sounds of the English Language, as found on pp. 17-30.

Since the diacritical marks represent the exact sounds to be used in the pronunciation of a word, it results that the sounds should be well-known in order that a word may be pronounced correctly. For this reason the reader will find an acquaintance with the sounds of the English language of vital importance.

If more assistance is needed than i given in this book, he is referred to th author's Manual of English Pronunciatio entitled "How Should I Pronounce ? published by G. P. Putnam's Sons, Ne York.

5. Remember that the signs or diacritical m used to indicate the correct pronunciations of are not spellings of these words in the ordinary but simply symbols for the sounds of the words.

6. Observe that in becoming acquainted v signs or diacritical marks, the vowel-signs principal ones to be learned, since the conso are generally familiar to the reader.

7. Observe that a reference to the Key of Signs will be found at the foot of each page.

It is well to consult this in all doubtful cases. If still further explanation is required, turn to the chapter on The Sounds of the English Language, p. 17.

8. Form the habit of using the correct Foreign Sounds rather than their substitutes.

If a person is acquainted with the French and German languages, it will, of course, be an easy matter to pronounce these foreign sounds correctly.

Otherwise it would be well to hear the sounds carefully pronounced by some one acquainted with them.

If, however, no such person can be found, the sounds may generally be learned by carefully following the directions given for producing them. But if one does not feel sufficiently confident of his ability to produce these sounds, he may, as a final resort, fall back on their English substitutes.

9. Although the abbreviations in this book are not numerous, time may be saved by at once fixing in the mind those few that are not already familiar.

10. Endeavor to carefully carry out the spirit of the preceding suggestions in the use of the book.

If this is done, it is hoped that no difficulty will be found in ascertaining the pronunciation of any word given in the list.

NOTE.—Any person, wishing to master the pronunciation of the seven thousand words, can easily do so in a few hours, by merely marking with a pencil those words presenting any difficulty, and afterwards reading the marked words two or three times. Of course, any one person would have difficulty with comparatively few words in the book.

Analogy, however, as well as the best and most general usage, is decidedly in favor of ē′-ther."

Walker remarks: "*Either* and *neither* are so often pronounced *ī′-ther* and *nī′-ther* that it is hard to say to which class they belong. Analogy, however, without hesitation, gives the diphthong the sound of long open *e*, rather than that of *i*, and rhymes them with *breather*, one who breathes."

Smart says: "Between *ēi′-ther* and *eī′-ther* there is little, in point of good usage, to choose; * * * but usage, as well as regularity, favors the sound of *ē* in these two words."

"For the pronunciation ī′-ther and nī′-ther there is no authority, either of analogy or of the best speakers."—*R. G. White.*
